Welcome to the  
National Institutes of Health

# Lobe-oratorium!™

An interactive game to help  
you understand how different  
parts of the brain work!

Which part of the brain...

...enables you to tell whether things  
are warm or cold to the touch?

...is needed for you to see the images  
and words in this game?

...will help you remember the facts  
you learned playing this game?

[Get Started!](#) 

# Which part of the brain...

Game Rules

Restart Game

Roll over a picture above to reveal a question. Drag and drop the image onto the appropriate part of the brain.

## Let the Game Begin

The images at the top of the screen represent different brain functions.

Your objective is to match each image to the correct lobe.

Roll over a picture above to reveal a question.

Drag and drop the image onto the appropriate part of the brain.

For each image, you have two chances to select the correct answer.

Good luck!

Roll over a picture above to reveal a question. Drag and drop the image onto the appropriate part of the brain.

**Frontal Lobe**

**Parietal Lobe**

**Temporal Lobe**

**Occipital Lobe**

**CORRECT!**

The parietal lobe helps with our sense of touch, and enables us to identify things by shape and feel, even in the dark.

Restart Game

Roll over a picture above to reveal a question. Drag and drop the image onto the appropriate part of the brain.

Frontal Lobe

Parietal Lobe

Temporal Lobe

Occipital Lobe

**SORRY,**  
**The Correct**  
**Answer is:**

The frontal lobe plays a large role in planning and reflection, and is considered the brain's decision maker.

## Congratulations!

You have successfully completed the Lobe-oratorium™ interactive game!

We hope you enjoyed learning about the lobes of the brain: frontal, parietal, temporal and occipital!
